Asbestos Management

Allium Environmental, provides expert surveying and inspection services along with asbestos management solutions, designed to give our clients peace of mind from the knowledge that they are fully compliant.

By creating safer spaces our aim is to protect people from the dangers of asbestos at work, home and leisure.

Surveying is a crucial process in the safe management of asbestos. It is essential not only for large construction projects but for any property owner who has a duty to manage any asbestos-containing materials.

We offer a full range of asbestos surveys and can assist with asbestos compliance management upon request. We also take individual samples to be sent to laboratories for analysis.

We follow the strict quality requirements set out in ISO/IEC 17020 which ensure our BOHS P402 certified surveyors carry out management, refurbishment and demolition surveys in accordance with HSG 264.

Key Personnel

With many years experience in the Asbestos and Construction Industries the personnel at Allium are composed from a mix of personalities and complimentary skill sets that form a technically strong, customer focused team that understands your asbestos related requirements and work together to provide a safe, compliant and cost effective solution.

Jason Hocking
Technical Manager

Jason originally trained as a quantity surveyor and project manager, and spent 21 years with the same consultancy, working across the country specialising in demolition and enabling work packages, he developed an interest in construction-related health and safety, training as a planning supervisor and as an asbestos surveyor in 2002.

Claire Stephen
Operations Manager

Manager with over twenty years working within the Asbestos Consultancy Industry. Committed to achieving and exceeding client targets whilst remaining focused on providing an exceptional quality and standard of service.

Claire is responsible for survey delivery and maintaining quality standards.
